WORKING PAPERS	“Exploring the Differential Impact of Repealing the ACA Individual Mandate by Health Status”. <i>Job Market Paper</i>. [Link] <i>Abstract:</i> Health insurance mandate can mitigate adverse selection, but its distributional consequences depend on who exits when enforcement ends. I study the 2019 elimination of the ACA individual mandate penalty, exploiting cross-state variation in mandate enforcement by comparing states without enforceable mandates with Massachusetts, New Jersey, and the District of Columbia, which had enforceable mandates. The policy increased the probability of becoming newly uninsured by 0.56 percentage points, or 27 percent of the pre-reform mean, with a statistically significant increase among relatively healthy consumers but not among relatively sick consumers. The benchmark Marketplace premium for a 27-year-old increased by \$739, while reported out-of-pocket premium spending declined by \$284.60. Financial-incidence analysis suggests that accounting for ACA subsidies attenuates the financial burden that would otherwise fall more heavily on relatively sick consumers. These findings show that the incidence of adverse selection depends not only on Marketplace premiums but also on how public subsidies shape consumers’ exposure to premium increases. “Does the Tobacco 21 Minimum Legal Sales Age Policy Improve Respiratory Health?
