EDUCATION	Georgia State University , Andrew Young School of Policy Studies Ph.D. <i>Economics</i> Expected 2027 M.A. <i>Economics</i> 2024 <i>Dissertation:</i> Essays on Health and Applied Development Economics <i>Committee:</i> James H. Marton (Chair), Lauren Hoehn-Velasco, Angela B. Snyder & David Wu University of Ibadan M.Sc. <i>Economics</i> 2018 University of Jos B.Sc. <i>Economics</i> 2012
ACADEMIC APPOINTMENTS	Federal University Wukari Associate Lecturer, Department of Economics 2020–2022 Assistant Lecturer, Department of Economics 2018–2020
FIELDS	<i>Health Economics, Public Economics & Demographic Economics</i>
JOB MARKET PAPER	“Exploring the Differential Impact of the Repeal of the ACA Individual Mandate by Health Status” <i>Abstract:</i> Health insurance mandates are designed to mitigate adverse selection by encouraging enrollment among relatively healthy individuals. This paper examines how the 2019 repeal of the Affordable Care Act (ACA) individual mandate penalty affected insurance participation, Marketplace premiums, out-of-pocket premium spending, and consumer surplus by health status. Using a two-way fixed effects design, I find that the repeal increased the probability of becoming newly uninsured by 0.56 percentage points (27 percent relative to the pre-reform mean), with nearly all of the increase driven by relatively healthy consumers. Benchmark Marketplace premiums increased by approximately \$739, while average out-of-pocket premium spending decreased by \$284.60 as ACA premium subsidies offset much of the premium increase. A consumer surplus analysis shows that, without premium subsidies, relatively sick consumers bear most of the welfare losses from adverse selection. Accounting for subsidies substantially mitigates these losses, demonstrating that premium subsidies alter the distributional consequences of adverse selection.
WORKING PAPER	“Does the Tobacco 21 Minimum Legal Sales Age Policy Improve Respiratory Health? Evidence from the United States” (with M.O. Emmanuel, G. Aipoh, V.J. Dickson, E.N. Collins). Revise and Resubmit, <i>Social Science & Medicine</i> <i>Abstract:</i> Tobacco control policies are widely evaluated based on their effects on smoking behavior, but less is known about their short-term health effects. This study examines whether Tobacco 21 minimum legal sales age (MLSA) laws reduce smoking and asthma prevalence among individuals aged 18–20. Using Behavioral Risk Factor Surveillance System (BRFSS) data from 2011–2019 and variation in the timing of policy adoption across states, we find that Tobacco 21 laws significantly reduce smoking but do not lead to a statistically significant decline in asthma prevalence in the short run. Subgroup analyses suggest larger reductions in asthma prevalence among Black young adults and 19-year-olds, although these estimates are statistically insignificant. These findings suggest that reductions in smoking following Tobacco 21 laws may not immediately translate into measurable improvements in respiratory health and highlight the importance of considering the timing of health effects when evaluating tobacco control policies.
